Portfolio: my-portfolio-two-livid-72.vercel.app

Professional Summary

React Developer with 6 months of production experience building React Native/Expo features (TypeScript, REST API integration) at Rubis Software Solutions, plus three independently-built full-stack projects spanning React, Node.js, and applied ML. Shipped a chatbot with 83.1 percent model accuracy and published an npm package used via global CLI install.

Technical Skills

Languages: JavaScript, TypeScript, Python, SQL

Frontend: React.js, React Native, Expo, HTML5, CSS3, Tailwind CSS

Backend: Node.js, Express.js, FastAPI

Databases: MySQL

Tools and Platforms: Git, GitHub, Postman, VS Code, JIRA, npm

Deployment: Vercel, Render

Experience

Mobile Application Developer Intern

Rubis Software Solutions | Remote | Jun 2025 - Dec 2025

- Reduced manual data lookup for users by unifying 4 data types (events, tasks, notes, posts) into a single date-filtered activity view with CSV export, using Axios/Fetch REST integration in React Native (Expo, TypeScript)
- Implemented a date-selection UI for birthdays and task scheduling, improving data entry consistency across 2+ app modules
- Cut task-status updates from a 2-screen flow (open task, edit, save) to a single gesture by building a long-press half-screen overlay (Created to In Progress to Completed)
- Shipped features as 1 of 3 frontend engineers on a 7-person cross-functional team building a multi-module productivity app

Testing Intern (1 month)

InfraBIM Techno Solutions | Remote | Feb 2024

- Manually tested 10+ features and logged 15+ bugs via JIRA/Excel, coordinating fixes with developers

Projects

Healthcare Symptom Chatbot | React, FastAPI, Keras, NLTK

GitHub: github.com/abhi7687/Helth_care_chatbot_using_FNN | Live Demo: helth-care-chatbot-using-fnn.vercel.app

- Built a full-stack symptom-checker chatbot with React and FastAPI, achieving 83.1 percent accuracy via a feedforward neural network (Keras) trained on 37 symptom/condition categories
- Executed an NLP pipeline (tokenization, stemming, bag-of-words with NLTK) to parse free-text symptoms and match against a structured dataset
- Designed a chat interface with persistent history and animated UI; deployed on Vercel

Weather Forecast App | React, OpenWeather API, JavaScript

GitHub: github.com/abhi7687/weather-app | Live Demo: weather-app-pkf8.vercel.app

- Developed a responsive weather app delivering real-time conditions and a 5-day forecast using the OpenWeather API
- Applied auto-location detection via browser Geolocation API alongside manual city search
- Built dynamic, weather-condition-based video backgrounds for enhanced UX; deployed on Vercel and Render

Task Tracker CLI | Node.js, npm

GitHub: github.com/abhi7687/task-tracker-cli

- Built a command-line task management tool (add, remove, update, list) using Node.js fs module with local JSON file persistence
- Packaged and published the tool as an npm package (@abhi7687/task-tracker-cli) for global installation via npm install -g

Education

B.Tech, Computer Science and Engineering

Malla Reddy University | Graduated May 2025 | CGPA: 8.78/10

Achievements

- 1st Place, AI/ML Hackathon – TechGyan Workshop, IISc Bangalore – Built an automated passenger safety alert system using Teachable Machine to detect yellow-line crossings at metro/railway platforms, competing against 10+ teams
